

GE Vernova's Protection, Control, and Metering solutions deliver precise, high-performance automation for today's evolving grid. From advanced relays to multifunction meters, our portfolio helps utilities ...

Protective relays and devices have been developed over 100 years ago to provide "lastline" of defense for the electrical systems. They are intended to quickly identify a fault and isolate it so the balance of ...

In this paper, we describe transient-based line protection principles that use traveling waves and fast incremental quantities. We briefly introduce the underlying principles and explain why these ...

REL670 provides protection of power lines with high sensitivity and low requirement on remote end communication. Measurements and setting of all six zones with six setting groups are made ...

Protect critical components in your power system with a wide range of SEL protective relays covering applications and use cases from low to high-voltage protection.

A fast and selective arc fault mitigation for air-insulated LV & MV switchgear and Relion protection and control relays and sensor technology protect staff and plant facilities for many years.

Our comprehensive portfolio of protection technology enables reliable grid availability in the voltage ranges of 10 kV to 110 kV. The protective and control devices can be used in, for example, single and ...

This example demonstrates how distance relays are set based on the reach setting and the line impedance to provide accurate fault detection and protection coordination in transmission lines.

It's an ideal solution for long extra-high-voltage lines, for complex systems where distance protection alone is inadequate, and for primary line protection when connecting wind farms to the grid.

These devices provide measurement, control, and relay protection for the 10 kV switchgear. Microprocessor-based integrated relays can support remote monitoring and control ...
