

Assign IP addresses to aggregation switches on the core switch

To configure an IP Address on a switch interface, first, we must change the interface from a layer 2 interface to a layer 3 interface. A point to note is that to provide an IP Address to a switch ...

Aruba Virtual Switching Extension (VSX) is virtualization technology for aggregation/core switches running the AOS-CX operating system. This solution lets the switches present as one virtualized ...

This article provides instructions on how to configure the IP address settings on the Sx350, SG350X, Sx500, Sx500X series switches through the Command Line Interface (CLI).

The core switch must have IP addresses that can be dynamically assigned, so that aggregation and access switches can obtain IP addresses when they go online for the first time in plug-and-play mode.

These are sample configuration commands for Cisco switches.

This will require a unique IP address on both switches. The IP address is in its own VRF so this address will not be reachable from anywhere besides the aggregation pair.

This article describes how to configure an IP address on a Cisco switch in order to connect over the network for management.

Assign IP addresses to aggregation switches on the core switch
