

Wall-mounted network cabinet for high-load and secure subnets, fully tidy cable entry, and ease of work thanks to side doors. The Aisle Containment System is a modular row-based thermal containment ...

High energy costs and accelerated energy consumption has forced data center managers to implement strategies to achieve separation between the hot and cold air in the data center.

Maintain optimal temperature control in your data center while ensuring easy equipment access with our containment dual sliding door, accommodating aisle widths of four and six feet.

Data centers opting for cold containment deliver cold air through a raised floor into the aisle. This air is contained in front of the cabinets, creating a homogeneous air plenum at the desired temperature.

AZE's hot and cold aisle containment systems are your solution. They separate cold air being supplied to your equipment from hot equipment exhaust air and enable greater cooling efficiency from data ...

Find out how to improve your data center infrastructure efficiency, using the cold aisle containment or hot aisle containment solutions from Vertiv.

Thanks to the specially designed fixing and flexible plastic isolation elements, the hot aisle chimney can easily be levelled and installed on top of the cabinets ensuring a flexible containment and airflow ...

By maintaining consistent, predictable temperatures, cold aisle containment minimizes thermal stress and reduces the risk of overheating, improving reliability and extending equipment lifespans.

Our aisle containment systems are vendor agnostic, featuring innovative, transparent panels that are lightweight and easily attached horizontally or vertically to cabinets using a universal rail system. ...

The aisle containment system is a modular rowbased thermal containment solution, which separates cold and hot data center air streams to and from equipment. It manages airflow at the source, ...
