

Selecting the correct cable tray type is not arbitrary--it depends on a combination of cable characteristics, environmental conditions, and installation requirements.

For ease of installation and accessibility, lay cable and hose in trays instead of pulling it through conduit or raceway. These tray systems allow excellent ventilation and prevent sagging while routing.

Manage your rooftop ductwork, pipes, or electrical cables with cable trays & supports from Protech Products. Protect your building and equipment today.

Confused about cable duct vs. cable tray? We break down the differences in material, use, and cost to help you choose the right cable management solution.

Raceway, Cable Tray, Duct, & Trough Raceway, Cable Tray, Duct, & Trough

Ladder or ventilated trough cable tray is an ideal support system for Type MI cable. Where small numbers of Type MI cables are involved, ventilated channel cable tray is the ideal support system.

Since the new cables can be installed by laying them in the tray, cable trays are useful when changes to the system are expected. There are a few types of cable trays including: solid-bottom trays, cable ...

MP Husky's cable tray selector for choosing the correct tray type (ladder, solid bottom, perforated, wire mesh) and size based on load, cable type and installation requirements.

Channel cable tray is used for installations with limited numbers of tray cable when conduit is undesirable. Support frequency with short to medium support spans of 5 to 10 feet.
