

# Double-layer suspension wire for overhead optical cable

According to the environmental conditions, length of span and types of cables it may be necessary to use extra protection rods (reinforced suspension assembly).

Features: a. Suspension OPGW cable with a larger contact area, stress distribution uniform, no stress concentration points, play better on cable protection, at the same time enhancing the stiffness of ...

The double layer formed wire suspension is for use on optical ground wire (OPGW) cables. Available with single or double suspensions.

Fiber suspension clamp is a connection fitting designed for overhead optical cables, used to hang optical cables on transmission line towers.

The bending radius of optical cable during laying process should be effectively guaranteed to avoid "gold hooks" and avoid too much tension, abrasion and too many times of twists and turns.

Apply two or three complete wraps of the suspension rod beyond each end of the insert. Over the contour of the insert, there should be no space between the rod and insert.

Quality Double Layer Formed Wire Suspension for OPGW - find quality Cable Accessories, Electric Cable & Cable Accessories from Henan Donghua Cable Co., Ltd. of China Suppliers - 165528709.

The optical fiber is placed in the ground wire of the overhead high-voltage transmission line to form an optical fiber communication network on the transmission line. This structural form has the dual ...

This is a double layer formed wire suspension for optical ground wire cables.

OPGW is a kind of overhead ground wire containing optical fiber, which has multiple functions such as overhead ground wire and optical communication.

When initially installed, the FIBERLIGN Suspension has a slip load of approximately 10-20% of a standard OPGW rated strength, but significantly higher loads can be expected after the unit has ...
