

Edge Data Center Armor for Railway Communications

Our railway communications solutions let you combine high-performance networking with technologies such as IoT, edge computing, cloud, machine learning and augmented reality to make your railway ...

To achieve these requirements, we propose an integrated network architecture leveraging communications, computing, edge intelligence, and caching in railway systems. We have conducted ...

Constructed from lightweight composite armor, the modules are air-and helicopter-transportable, delivering secure compute capacity to forward ...

In tandem with RCR's Defense Communications Forum, RCR Wireless ran a series of articles about edge computing and private networks for physical AI and AI inference in industrial and ...

As OT applications migrate to cloud environments, mission-critical rail communications are extending into the data centre domain. This evolution places new demands on performance, ...

We provide cutting-edge tools for cyber-secure asset monitoring. In addition, Edge Computing, and critical infrastructure deployments, while ensuring seamless legacy interface migration to packet ...

To enable the deployment of simulation/emulation platforms for critical railway services, potentially implemented in edge servers, it seems essential today to propose new solutions based on the ...

It seamlessly integrates into body armor systems, reducing kit configuration time by 90%. This allows edge users to quickly adapt to changing mission requirements while also providing additional ...

A consortium of four Tokyu Group companies announced on March 23 that it will install a modular data center beneath an elevated section of the Oimachi Line in Tokyo starting in June 2026,...

Discover Meritec's rugged edge computing cable assemblies for military, industrial, and AI edge devices. Built for extreme environments with EMI shielding and signal integrity.

Constructed from lightweight composite armor, the modules are air-and helicopter-transportable, delivering secure compute capacity to forward bases, mobile command centers, and ...
