

The Eye model is designed to best represent the real cornea by taking into account the typical eye geometry, Poisson ratio, Young's modulus, and maximum load pressure.

Complete Eye examination Eye exam for glasses Eye background exam Cataract exam Glaucoma exam - eye pressure, pachymetry Optical Coherence Tomography exam (macula lutea, optic nerve) ...

The Eye Diagram can show the transmission quality of digital signals. It is often used in applications where electronic devices, serial digital signals or high-speed digital signals in chips are ...

In this paper, a tiny portable block integrating pattern generation and sampling based on delay line has been proposed. It's adaptable for both low and high data line speed from 1Mbps to 32Gbps to meet ...

With eye diagrams you can see signal quality with one display, you can diagnose problems, such as attenuation, noise, jitter, and dispersion that arise or characterize specific parts of the system. You ...

Calibration laboratories are accredited in both regulated and non-regulated areas. In the regulated area, SNAS cooperates with national regulators for various areas of calibration with &#218;NMS SR.

The first eye clinic in Slovakia and the Czech Republic to use the cutting-edge Danish laser Norlase ECHO has brought innovative technology that changes the approach to the treatment of the retina ...

Our experts have many years of experience in the industry working on all types of equipment calibration using a wide range of international measurement reference standards.

For system verification and debugging, eye diagram measurements are the most important tools for efficiently analyzing the signal integrity in any digital design.

Slovakia and the Czech Republic host several aerospace component manufacturers and defense contractors that calibrate instruments to meet stringent European standards.
