FC Interface Size Standard

This standard describes the framing and signaling interface of a high performance serial link for support of FC-4s associated with upper level protocols (e.g., SCSI, IP, SBCCS, VI).

The FC/PC (Physical Contact) and FC/APC (Angled Physical Contact) fiber optic connectors are standardized under TIA EIA/TIA-604-4 and IEC 61754-13. Learn more.

Abstract equirements. The Physical Interface requirements are de-scribed in Fibre Channel-Physical Interfaces - 6 (FC-PI-6) and Fibre Channel-Physical Interfaces - 6 (FC-PI-6P). The Framing and ...

As a working group within INCITS-and of particular relevance to the cabling industry-Technical Committee 11 (T11) is responsible for developing standards for Fibre Channel, which continues to be ...

This standard describes the physical interface portions of high performance optical link variants that support the higher level Fibre Channel protocols including FC-FS-4 (reference) and FC-FS-5 ...

Fibre Channel is standardized in the T11 Technical Committee of the International Committee for Information Technology Standards (INCITS), an American National Standards Institute (ANSI) ...

FC-PI-8, which stands for Fibre Channel Physical Interface 8, is the latest iteration in the Fibre Channel physical interface standards. It doubles the data rate of the previous 64GFC standard ...

This standard describes the physical interface portions of high performance optical link variants that support the higher level Fibre Channel protocols including FC-FS-4 (reference), FC-FS-5 ...

The INCITS/Fibre Channel Technical Committee is responsible for the development of the Fibre Channel (FC) standards. These standards specify the following: Other technical work deemed ...

In 1994 Fibre Channel was accepted as an ANSI standard and a year later the duties of the FCSI were handed over to the larger Fibre Channel Association. Fibre Channel has revolutionised the way ...
