

Buried cable detection systems provide reliable protection for applications that require hidden perimeter protection. These volumetric smart sensors detect walking, running or crawling intruders within 3 ...

Since 1970, Budco has provide cable construction tools, cable installation tools, and cable identification tools including fiber optic test equipment and tools for the telecommunications industry.

Deploying the RaySense fiber-optic intrusion detection system provides a reliable perimeter security solution for areas up to 100 kilometers or 62 miles, using a single fiber-optic cable. The system can ...

Detectable Pull Tape is the solution--a flat, woven polyester tape with a built-in tracer wire that allows for easy cable location using standard underground locating equipment.

This Ideal Detectable Underground Caution Buried Fiber Optic Line spool is vital to ensuring that your cables can be found by utility markers and provide a safe "whoops" margin for ...

Detectable Tape is used for locating and protecting buried utility, communication, CATV, fiber optic, sewer, water, and gas lines along with cables and conduits.

OmniTrax is a volumetric sensor that uses a pair of buried cables to generate an invisible above-ground electromagnetic detection field. When an intruder enters the field, an alarm is generated.

Fiber optic sensors are among the most advanced and widely used buried cable sensors. They work by sending light signals through a fiber optic cable and monitoring the changes in the light ...

The set includes a monoblock receiver with a large LCD screen, which indicates actual position of cable and pipe and automatically measures burial depth of located utility up to 10 m, as well as current rate.

Locating buried fiber optic cables is a critical task that requires precision and care. By using the right tools and following best practices, you can ensure the safety of your project and the ...
