

Flame-retardant data center racks in Austrian overseas warehouse

Secure fire protection from the outside with our server rack as a separate fire compartment and fire protection from the inside with our 19" extinguishing system or oxygen reduction.

Formex materials are engineered to meet stringent regulatory requirements, including UL 94 V-0 flame retardancy and RoHS compliance. This enables efficiency improvements without compromising audit ...

Based on a risk analysis and your specific protection goals, our fire protection experts develop customized solutions that ensure the uninterrupted availability of your data and systems.

Optimize data centers with performance plastics for aisle containment, airflow management, and equipment protection. Lightweight, impact-resistant, and modular, plastics improve cooling, reduce ...

Explore STI's firestop solutions for data centers, offering unique, maintenance-free pathways for high cable density ensuring compliance and protecting critical infrastructure.

Therefore, a wide range of applied skills in fire engineering is required to develop a fire safety design for these data centres. In this article, we investigate how fire ...

Therefore, a wide range of applied skills in fire engineering is required to develop a fire safety design for these data centres. In this article, we investigate how fire safety design can be applied in the ...

When exploring the fire protection industry in Austria, several key considerations come into play. The regulatory framework is paramount, as Austria adheres to strict fire safety laws, including the ...

From industry-embedded experts and engineered system design to seamless installation, performance monitoring, and real-time remote oversight, our team delivers comprehensive fire protection support ...

When designing or retrofitting a Data Centre, it will be also important to take into consideration early fire detection systems, as well as protecting the critical infrastructures such as electrical rooms, UPS ...

The racks and aisle containment would shield a fire from sprinkler droplets. The high airflow would likely have a detrimental effect on the delivery of smaller water mist droplets, whereas the study by the FIA ...

A practical, standards-based guide to fire detection and suppression in data centers. Covers NFPA 75/2001, TIA-942 and more.
