

# Flame-retardant optical cable for signal transmission

Find your flame-retardant optical cable easily amongst the 51 products from the leading brands (LEMO, LAPP, SAB, ...) on DirectIndustry, the industry specialist for your professional purchases.

They are mainly installed in metro stations, tunnels, oil & gas refineries, petrochemical plants, subways or closed areas in general, specially designed to guarantee the signal transmission even in case of fire.

Fire-Resistant Optical Cables are specially designed to maintain data transmission integrity even in the event of a fire. Constructed with materials that resist combustion and prevent the spread of flames, ...

Lifeline®; QFCI is the first UL flame listed optical cable designed for indoor/outdoor use in vital communication and emergency systems that need to be operational during fire. The cable has a ...

Meeting stringent international standards, these cables are tested for both fire resistance (IEC 60331-25) and flame retardancy. This ensures continuous operation during fire emergencies, maintaining critical ...

They provide very high-speed data transmission over greater bandwidths compared to traditional copper cabling and are also able to carry the signal over much longer distances without signal loss.

For fire-critical areas, choose fire-resistant, LSZH fiber optic cables that are certified (e.g., FE180 and CPR B2ca) to maintain transmission and minimise smoke/toxic gases during a fire.

Explore how to select the right fiber optic cable for challenging environments including high temperatures, extreme cold, salt spray, humidity, underground ducts, and direct burial.

This innovative cable features a patented design that ensures functionality for over three hours in temperatures reaching 1000°C. It is halogen-free and flame-retardant, providing protection against ...

CPR fire-resistant optical cables with Euroclass Dca, Cca, and B2ca classifications. Safety and performance for critical applications.
