

How to use the optical port on a Huijue switch

This article summarizes several solutions for using optical modules with switches and common problems encountered during usage, along with specific solutions.

Remove the dust plug from an optical port. Keep the dust plug for future use. Ensure that the optical module is correctly oriented and gently push it into the optical port until you hear a click. If the optical ...

To connect a fiber, align the optical connector with the optical port and gently insert the optical fiber into the port. To remove a fiber, press the clip on the connector and pull the fiber out.

To prevent such damage, reduce the transmit power of the optical module on the remote port or use optical attenuators on the link between the local and remote ends.

When the transmit/receive power of the optical ports is too high, optical modules on the ports may be damaged. In this case, connect an attenuator to the optical modules.

The following uses the Moduletek SFP-10G-LR module connected to a Huawei S6700 switch as an example to introduce how to read information of the connected optical module on a ...

Step 1: Antistatic strap must be worn to prevent static damage. Step 2: Take out the optical module, ring and label up, the gold finger is facing down, Note that the right and the negative can not be reversed. ...

Ensure that the optical module is correctly oriented and gently push it into the optical port until you hear a click. If the optical module cannot be completely inserted into the optical port, do not force it into the ...

Use the command display transceiver to view the optical module information of all optical ports, and use the command display transceiver interface interface-type interface-number to view the ...

If an optical module is installed in a running switch, you can run the display transceiver command to view parameters of the optical module, including the center wavelength, transmission distance, fiber types ...
