International network fiber optic cable connection

OverviewDescriptionSegments and landing pointsDisruptionsGCHQ interceptionSee alsoFibre-optic Link Around the Globe (FLAG) is a 28,000-kilometre-long (17,398 mi; 15,119 nmi) fibre optic mostly-submarine communications cable that connects the United Kingdom, Japan, India, and many places in between. The cable is operated by Global Cloud Xchange, a subsidiary of RCOM. The system runs from the eastern coast of North America to Japan. Its Europe-Asia segment was the fourth longest cable in the world in 2008.

The World Fiber availability map. See where The World offers service and check coverage at your address.

See the world internet cable map and learn how global internet connections actually work. Updated visuals show undersea cables, chokepoints, Africa"s expansion, and what happens when cables fail.

Fibre-optic Link Around the Globe (FLAG) is a 28,000-kilometre-long (17,398 mi; 15,119 nmi) fibre optic mostly- submarine communications cable that connects the United Kingdom, Japan, India, and many ...

Detailed maps of more than 100 terrestrial fiber networks throughout the world owned and operated by local and national telecom operators and international backbone providers.

Explore the physical backbone of the internet with our interactive map of undersea fiber optic cables, peering exchange points, and more. Visualize the growth of global connectivity.

Massive networks of fiber-optic cables, thinner than a garden hose, crisscross the seabed, linking continents and providing the bandwidth necessary for most global internet traffic.

TeleGeography"s comprehensive and regularly updated interactive map of the world"s major submarine cable systems and landing stations.

See the world internet cable map and learn how global internet connections actually work. Updated visuals show undersea cables, chokepoints, Africa"s expansion, ...

Fiber maps visualize the global network of fiber optic cables, showcasing how data moves across continents and under oceans. Telecommunications providers rely on these maps to optimize routing, ...

Over 99% of international internet traffic flows through undersea fiber optic cables. These cables are laid on the ocean floor and connect continents like invisible digital highways.
