

Low Voltage Disconnection Relay Protection

Discharging batteries beyond a critical low voltage can damage the batteries and/or load, and require a longer recharge interval. A low voltage disconnect prevents this condition.

Optimize battery performance with InPower's LVD20 Series Low Voltage Disconnects, designed to automatically safeguard against excessive discharge by disconnecting 12 volt loads at critical battery ...

The Low Voltage Disconnect (LVD) is a 100% solid state electronic protection module which disconnects predetermined auxiliary loads from the starting battery bank to assure enough power is left in the ...

The relay is powered by a 12-or 24-volt DC source and is fully encapsulated for harsh environment mounting applications. Loads with more than 10 amps require switching a larger capacity relay.

InPower's Model LVD21-100, -150, and -200-60S Series Low Voltage Disconnects automatically disconnect 12-volt loads from the battery when the battery voltage drops below 11.5Vdc for 60 ...

Low-Voltage Disconnects prevents batteries from discharging too far, protecting both the battery and the vehicle's electrical system. An LVD monitors battery voltage and automatically disconnects non ...

Using a low voltage disconnect relay helps prolong vehicle battery life by preventing a charge from draining while the vehicle is idle. Standard and compact relays made by Littelfuse allow users to ...

Discover low voltage disconnect modules to safeguard your lead-acid, lithium-ion, or solar batteries. Enjoy precise voltage control and added safety features.

Blue Jay offers a complete portfolio of low voltage protection relay designed for monitoring and protection in industrial and power systems.

Protect your battery from over-discharge with low-voltage disconnects and smart battery protect devices for 12V and 24V systems. Choose compact LVD modules, timer-based auto disconnects, marine ...
