

Curated list of awesome articles and resources to learn and practice about software architecture, patterns and principles.

SMARTLAM is a European funded research project, intended to develop a modular manufacturing platform and capability database, for three-dimensional integration/manufacturing of ...

MVP provides a powerful, extensible platform for automated, interactive visualization of proteogenomic results within the Galaxy environment, adding a unique and critically needed tool for empowering ...

Connect with engineers across the globe, help solve technical challenges, and share knowledge with each other.

Here, we describe a modular and open-source computational pipeline, MCMICRO, for performing the sequential steps needed to transform whole-slide images into single-cell data.

The aim for the research presented here, is to develop a software toolkit that facilitates the visualization and selection of process chains for the manufacture of functional micro-devices starting from the ...

Micro frontends extend the principles of microservices to the frontend world. Instead of one big frontend app, you build independent frontend modules, each owned by a team, using its own tech ...

Our next-generation developer platform scales to help you defragment your AI and compute stacks and realize more value from the incredible pace at which AI is evolving.

In this paper, we present a visualization framework named HIVE (Heterogeneously Integrated Visual-analytics Environment), which uses Lua scripting language for representing user ...

Design a modern, intuitive HMI with FactoryTalk Optix, an HMI visualization platform that delivers unmatched flexibility, scalability and interoperability. Object-oriented design helps reduce ...
