

# No signal at the optical splitter port

In this case use an optical power meter (OPM) and test the input port of the splitter for the optical power level (dBm) from the OLT at 1490 nm. If there is no or reduced power then the patchcord or OLT is ...

I can't even get to my kitchen to make coffee without audio breakup using Bluetooth headphones due to the signal range. Multiple simultaneous headset support is still limited in source ...

This guide focuses on two critical aspects of optical splitters that define FTTH performance: split ratios (how signals are divided) and splitting architectures (how splitters are ...

Many people struggle with HDMI splitters, and it's often due to a simple issue that can be easily resolved. In this article, we'll explore the common reasons why your HDMI splitter might not be ...

Optical fiber networks rely on splitters to divide light signals into multiple paths for distribution to subscribers. Splitter loss is a natural consequence of splitting the light signal, where ...

Cause: The resolution or refresh rate is too high for the splitter, or the cable is too long or of poor quality. We always recommend using High-Quality HDMI cables, a maximum up to 30 feet for optimum ...

Start by connecting a launch reference cable to the optical light source with the correct wavelength (since some splitters depend on the wavelength). Then, use the optical power meter to ...

I recently bought a soundbar for my TCL TV. It connects with the TV via an optical cable. However, for a while now, I've had an optical cable running from...

I'm guessing the connectors on my older cables were slightly worn, and the splitter does not provide a perfect pass-through - therefore, the older cables don't accept the signal from the splitter.

This guide exists to help you diagnose these common OBD2 splitter cable problems, understand their root causes, and make an engineering-driven selection to avoid them.
