MPS's PoE (Power over Ethernet) ICs enable easy design, simple BOM, and high efficiency for applications that require delivering power over Ethernet cables. We can also provide strong design ...

We offer an end-to-end portfolio of Power over Ethernet (PoE) solutions comprising PoE ICs and PoE systems such as PoE midspans, PoE injectors and PoE switches.

Our latest generation PSE controllers are IEEE compliant, use 0.15 Ω sense resistors to lower power dissipation, and use a high reliability 4-point PD detection scheme to eliminate false PD detections.

With higher efficiency, improved scalability, and support for advanced IEEE PoE standards, these controllers are essential for modern networking and IoT ecosystems.

The design of power supply sections for all powered devices can be greatly simplified with the PM880x family, integrating a PoE interface and a current-mode PWM controller.

Our complete portfolio of Power over Ethernet (PoE) injectors/midspans and switches offers you industry-leading solutions for any PoE application.

Power over Ethernet (PoE) controllers allow designers to transmit electrical current and data over a single Ethernet connection. Remote devices are powered through Ethernet cabling, eliminating the ...
