

Relay protection hardware and software combination

The practical sessions covering the calculation of fault currents, selection of appropriate relays and relay coordination as well as hands-on practice in configuring and setting of some of the commonly used ...

Compared to the microcomputer protection device, the relay protection SoC architecture and hardware and software collaborative protection algorithms proposed in this paper replace the ...

In this paper, a microcomputer protection device based on the TMS320F28335 chip is developed. Considering the anti-interference of field use, detailed hardware and software design is ...

The results show that the relay protection SoC proposed in this paper has significantly improved the performance of high-speed data acquisition and interaction through hardware algorithm...

REX640 offers unmatched flexibility throughout its entire life cycle - from ordering through testing and commissioning, to upgrading the functionality of its modular software and hardware to meet new ...

The system supports the resource configuration of each link of relay protection, such as hardware feature configuration, software feature configuration, protection logic view configuration and overall ...

Virtual Protection Relays (VPRs) are a major step in this evolution. Instead of using dedicated hardware devices, protection functions now run as software on virtual machines or high ...

Sophisticated test hardware and software solutions to analyze the entire protection system performance. Compact, high-power relay test systems with IEC 61850 protection test capabilities and advanced ...

The SEL-351 Relay has built-in Ethernet and IEEE C37.118 synchrophasors, and is ideal for directional overcurrent applications. Optional Mirrored Bits[®]; communications and power quality monitoring add ...

Virtual Protection Relays (VPRs) are a major step in this evolution. Instead of using dedicated hardware devices, protection functions now run as ...

Relay protection hardware and software combination
