

To use the tool, simply upload your sprite image, input the tile size or the number of columns and rows in which you want to slice the image. You can also set offsets and spacing if your sprite sheet doesn't ...

Resource Splitters are unique machines that don't apply any upgrades to resources. Instead they take a larger resource drop and split it into multiple smaller pieces.

Sprite Splitter: New Grid split mode - allows you to split a grid based on pixel dimensions instead of scanning. This is a more rigid way of cutting up a sprite sheet, so it will only work when the ...

Looking to reassemble a spritesheet?

It doesn't, it's all random. Well, going right or left depends on which way you are facing. But the selected resource should go out the "front"; and the other resources should come out the ...

Slice Minecraft HUD sprites into individual PNGs for modern packs or quickly crop any part of the sheet with a precise selection tool. Perfect for resource pack creators updating from Java Edition 1.20.1 ...

Extract sprites online from sprite sheets, atlases, tilesets, icon boards, and image collages. Use auto-detect when regions are irregular, separated by transparency, or laid out unevenly, or switch to Grid ...

To start simply upload your spritesheet, once uploaded you will need to set how many columns and how many rows are on the spritesheet. The spritesheet slicer will automatically draw the cutting lines for ...

Easy-to-use sprite sheet splitter for game developers, pixel artists, and indie game makers.

TexturePacker detects changes in your sprite folders: Newly added, renamed or deleted sprites automatically trigger a re-packing of the sprite sheet. Drag & drop your sprite folders onto ...

Extract sprites online from sprite sheets, atlases, tilesets, icon boards, and image collages. Use auto-detect when regions are irregular, separated by transparency, ...
