

Selection of Dedicated Spectrometers for Petroleum and Petrochemical Industries

It is a compact, rugged, transportable and easy to use spectrometer designed specifically for the analysis of wear metals, contaminants and additives in lubricants, hydraulic fluids and coolants.

Bruker offers best-in-class turnkey elemental analysis solutions and spectrometers for the entire petrochemical industry.

It is a compact, rugged, transportable and easy to use spectrometer designed specifically for the analysis of wear metals, contaminants and additives in lubricants, hydraulic fluids and cool.

PAC offers an extensive portfolio of cutting-edge solutions for gas chromatography, elemental analysis, physical properties, and more.

Explore WDXRF solutions for precise elemental analysis in petroleum and fuels, ensuring quality control and regulatory compliance across various applications.

The FTPA2000-HP260X is a versatile multichannel fibre-optic based process FT-NIR analyzer platform suitable for hydrocarbon and petrochemical applications, designed for operation in potentially ...

One of the newest developments, particularly important for the petrochemical industry, is ultrahigh-resolution instrumentation, which has been made commercially available since 1974.

spectrometers. It is a compact, rugged, transportable and easy to use spectrometer designed for the analysis of wear metals, contaminants and additives in lubricants, hydraulic fluid.

«This practice covers a guide for the multivariate calibration of infrared (IR) spectrophotometers and Raman spectrometers used in determining the physical, chemical, and ...

Welcome to our Solutions section, where we offer a diverse range of advanced analytical instruments and technologies tailored to meet the specific needs of the oil and gas industry.
