

These beamsplitters can separate components of a laser beam based on wavelength, or to truly combine different wavelengths (or bands) with minimal loss, and are thus suitable for high power ...

Whether you're designing an interferometer, fluorescence system, or beam combining setup, selecting the right beamsplitter is essential for optimal performance.

There are two main types of beamsplitters, plate beamsplitter and cube beamsplitter and each has their own advantages. Some industries that use beamsplitters are interferometry, bio-medical, metrology, ...

Beam splitting cubes, also known as beam splitters, are optical devices used to split a beam of light into two separate beams. These cubes typically consist of two right-angled prisms that are cemented ...

Laser Beam Delivery Systems and Laser Components by Haas Laser Technologies. Haas manufactures custom-built high precision industrial laser components.

This article explores the fundamental principles and diverse applications of beamsplitters, detailing their different types and uses in fields such as optics and interferometry.

Dichroic Beamsplitters, which split light by wavelength, are often used as laser beam combiners or as broadband hot or cold mirrors. Non-Polarizing Beamsplitters, ideal for laser beam manipulation, split ...

This document describes how Keysight's family of high performance beamsplitters offers industry-leading polarization and beam control with low wavefront distortion.

Our beam splitters are made from high grade glass material with laser grade surface flatness & surface quality for tighter tolerance on the splitting ratio.

Thorlabs offers a wide range of optical beamsplitters. Our plate beamsplitters have a coated front surface that determines the beam splitting ratio while the back surface is wedged and AR coated in ...
