

One key factor is the number of cores, which impacts how much data you can transmit. This post will guide you through understanding fiber optic cores and selecting the perfect cable for...

For example, if you have three optical fiber access switches, you need to have three cores. (actually use a four core optical cable) This is because apart from one-core optical fiber, there are ...

If you only have 1 core switch, the topology you will be looking at is Hub and Spoke. For redundancy, you would be looking at a peer connections to your nearest neighbor edge devices or ...

In the star topology, all devices need to be connected to the central hub, which means the core switch must have corresponding SFP ports that allow you to establish a dedicated fiber link ...

This article will walk you through the basics of fiber optic cores and provide practical guidance for selecting the suitable fiber optic cable to meet your networking needs.

Complete guide to choosing fiber cables and SFP modules for UniFi networks. Single-mode vs multimode, DAC cables, 10G/25G modules, and deployment scenarios.

This document describes how to troubleshoot fiber optic interfaces by addressing some of the fiber optic module and cabling specifications.

When selecting fiber, the first step is to determine single mode or multimode, and the second step is to determine the number of fiber cores you need to use. The number of cores refers to ...

Most modern fiber-enabled network switches require an SFP transceiver module featuring a duplex (two strand) multimode OM3 or duplex single mode OS2 connection with LC connectors. Direct attach ...

How to determine the number of cores required when using fiber optic? The number of fiber cores is mainly related to the device interface of the fiber connection and the communication ...
