

If the power of the variable is 1, it is called a linear function, if the power is 2, it is called a quadratic function, and if the power is 3, it is called a cubic function.

A function is a relation that uniquely associates members of one set with members of another set. More formally, a function from A to B is an object  $f$  such that every  $a$  in A is uniquely ...

Demonstrate a knowledge of spectrometers by writing statements explaining the functions of each of the following components of a given prism spectrometer and of a given grating spectrometer.

The simplest definition is: a function is a bunch of ordered pairs of things (in our case the things will be numbers, but they can be otherwise), with the property that the first members of the pairs are all ...

Heating the entire device including the sampling line can of course mitigate condensation of such compounds, but this comes at the cost of reduced resolving power and compromised detection ...

The concept of a function was formalized at the end of the 19th century in terms of set theory, and this greatly increased the possible applications of the concept. A function is often denoted by a letter ...

The slit width determines how much light (intensity) enters the spectrometer and determines the resolution of the spectrometer. The narrower the slit, the higher ...

FUNCTION definition: 1. the natural purpose (of something) or the duty (of a person): 2. an official ceremony or a.... Learn more.

To understand the powerfulness and usefulness of FTIR spectrometer, it is essential to have some background information of dispersive IR Spectrometer. The basic components of a ...

Function in math is a relation  $f$  from a set A (the domain of the function) to another set B (the co-domain of the function). Explore with concept, definition, types, and examples.

Using the device when its temperature is too cold (less than 10°C) or too hot (greater than 40°C) can lead to the thermal contraction/expansion of the internal optics, which therefore adversely impacts ...

1. Introduction 2. Principle of Working of Mass Spectrometers is in a mass spectrometer is subjected medical, forensic, food, and other sciences. This technique to high vapor pressure (heating), which ...

Mass spectrometer heating elements, also referred to as source heaters or gas line heaters, are used in mass

spectrometers to turn the sample (typically in an aqueous or organic solution) into a vapor for ...

Heating must be done under the conditions (temperature, heating time, and temperature raising method), which suit the type of element and composition of the sample to be measured.

Mass spectrometer heating elements, also called source heaters or gas line heaters, are used in mass spectrometers to turn the sample (typically in an aqueous or organic solution) into a ...

Find 118 different ways to say FUNCTION, along with antonyms, related words, and example sentences at Thesaurus .
