

The router does not support 100Mbps fiber optic internet

Why am I not getting the maximum speed that my router is capable of? Many factors can affect your Internet connection speed for devices on your home network. Before troubleshooting, ...

Yes, you can often use your existing router with fiber optic internet, but there are crucial considerations. Understanding compatibility, potential limitations, and when an upgrade is necessary will ensure you ...

Read this to figure out why your fiber internet is slow and how to fix it fast, along with the common causes and what to do to resolve them.

Some customers may report the speed is limited to 100 Mbps when connected to the TP-Link router, while the speed is much faster and can reach up to 500+ or 900+ Mbps when connecting ...

I recently went from 100Mbps up/down (fiber) to 1Gbps; However my Computer isn't getting that speed, no matter what i do it's stuck at 100Mbps; from what i know, it could be the ...

Sometimes I unplug the cable from my computer and plug it into a laptop, it makes the router recognize the laptop accepts more speed and unlock the 1Gb speed.

I tested this cable without router and get 300mbps in my desktop, but when I connect the cable in my router, the lan and wifi connections are limited to 100mbps.

An older router designed for 100 Mbps or even standard Gigabit Ethernet might become a bottleneck, preventing you from experiencing the full benefits of your fiber connection.

If you have that Omen 15 hooked up via wired Ethernet, look in Windows network settings and confirm it's connected at 1000/1000 instead of 100/100. All the ports on that gateway support 1Gbps.

One common problem arises when your Internet connection does not run as fast as it should. Now and then, gigabit-capable connections only show up as running at 100MB.
