

Tunnel Distribution Assemblies are generally fitted with industrial socket outlets to BS EN 60309, which ensure quick, safe and reliable connections. Standard socket outlets are available in ratings of 16A, ...

The distribution box is an important device used to install, protect and distribute electrical equipment, and its fixing method is crucial to ensure safe and efficient electrical distribution.

Starting from the main distribution, the TAP box supplies power to your individual tunnel applications, such as the lighting and evacuation systems. This protects the main distribution from short circuits.

The power required for supplying a tunnel is directly related to the nature and number of equipment installed in it. Depending on the amount of electrical energy required (kWh), power may be supplied ...
