

Vibration damping of components in the distribution box

Discover expert vibration damping with custom silicone components from Hongju. Reduce noise, protect equipment, and improve performance in any industry.

To minimize or prevent noise and vibration from transferring between equipment and floor or solid support structure. Typical applications include air handling units, air conditioners, compressors, ...

Most elastomeric engineering materials for vibration isolation use a mechanism known as hysteretic damping to dissipate energy. When these materials are deformed, internal friction causes high ...

The VORTX Vibration Damper responds to wind-induced line vibration that is characterized by high-frequency, low-amplitude motion commonly known as aeolian vibration.

To investigate the impact of several crucial parameters on the vibration of the box structure, an equivalent theoretical model of the box structure is established.

The invention relates to an improved sound and vibration device in a motor vehicle electrical distribution box.

A vibration and noise control scheme based on particle damping technology is proposed to address the problem of structural noise disturbance caused by vibration of power distribution ...

This paper analyzes the improvement effect of shock absorber developed by particle damping material on reducing the overall noise of power distribution room, and compares the ...

Our electric panel mounts can be easily mounted in shear or compression and are suitable for damping vibrations in panels weighing from 40 Kilograms to 5,000 ...

Vibration damping reduces the level of vibration generated from plant elements and their components during industrial use. It does this by dissipating vibration energy, leading to a significant reduction in ...

Our electric panel mounts can be easily mounted in shear or compression and are suitable for damping vibrations in panels weighing from 40 Kilograms to 5,000 Kilograms.

When this is not possible or practical, shock and vibration must be controlled through mitigation. Mitigation often includes the integration of special hardware including shock absorbers, dampers, ...
