OverviewStandard implementationTechniquesStandards developmentUsesTerminologyPower management features and integrationNon-standard implementationsStandards-based Power over Ethernet is implemented following the specifications in IEEE 802.3af-2003 (which was later incorporated as Clause 33 into IEEE 802.3-2005) or the 2009 update, IEEE 802.3at. The standards require Category 5 cable or better for high power levels but allow using Category 3 cable if less power is required. In multi-pair cases, PoE supplies power as a common-mode signal over two or more of the differential pairs

A PoE switch is a special network switch that sends electricity and internet data through one regular Ethernet cable (like the ones you use for Wi-Fi or computers).

This power comes from a PoE-providing device like an Ethernet switch or a PoE injector. This phantom power technique works with 10BASE-T, 100BASE-TX, 1000BASE-T, 2.5GBASE-T, 5GBASE-T, and ...
