The following guide systematically describes each connector type to help you make an informed selection for the connector that best suits your fibre-optic networking system.

The FC connector is a fiber-optic connector with a threaded body, which was designed for use in high-vibration environments. It is commonly used with both single-mode optical fiber and polarization-maintaining optical fiber. FC connectors are used in datacom, telecommunications, measurement equipment, and single-mode lasers. They are becoming less common, displaced by SC and LC connectors. The FC connector h...

Usually, an FC connector consists of three main parts: the ferrule, the threaded metal barrel, and the coupling nut wire in place. The ferrule is often filed so that precise core alignment is ...
